## Disclosures

I have no relevant relationships with commercial interests to disclose.

I “stole” these slides from Adam and Boyd (except for the bad jokes).

2

## Maturity Models not Mature Models

AMIA

2022 Informatics Summit | amia.org

3

3

## Where are we? Where are we going?

AMIA  
INFORMATICS PROFESSIONALS. LEADING THE WAY.

## Maturity models

- Framework to assess and guide planning
- “Maturity” refers to the degree of formality and optimization of processes and capabilities.
- Developed in 70’s for manufacturing
- Capability maturity models for software engineering developed in 90’s

5

## Three examples

- Quality Management Maturity Grid
- Grid-based maturity model
- Orgs evolve through levels of maturity

- HIMSS EMRAM
- Specific capabilities tied to maturity
- Broad adoption
- Ongoing development of new tools

- EDUCAUSE maturity indexes
- Specific categories with maturity anchor statements
- Likert-scale questionnaire
- Part of core data service

6

## Maturity .vs. Deployment/Adoption indexes

- **Maturity Index**

- Related to standardizing and optimizing **processes** and functions
- Related to technology adoption, but not technology centric, per se
- Measures organizational capacity to deliver a service.

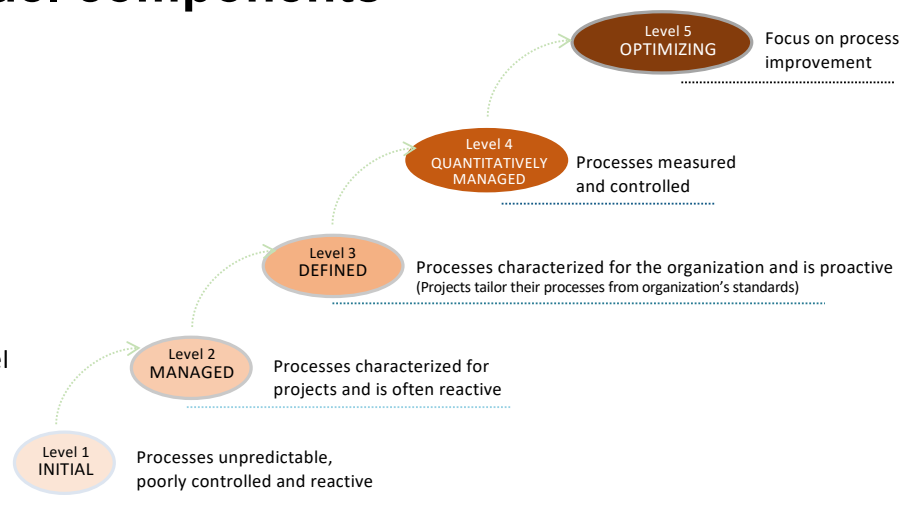

- **Deployment/Adoption Index**

- Related to optimizing technology adoption and use for particular outcomes
- Focused on technological **capabilities**, infrastructure supported by organizational processes
- Measures the degree to which an institution has deployed technologies related to delivering a service.

7

## Maturity model components

- Levels ~(3-7)
- Maturity labels
- Level characteristics
- Categories
- Ratings:
  - Activities at each level
  - Anchor statements
  - Likert scales

8

10: Choose the statement that best describes your institution's research computing capabilities:

1. High performance computing (HPC) resources exist at our institution, but they are not not broadly available or centrally supported.
2. We have centrally supported HPC resources that investigators know how to access, but our capacity is limited and there are no clear expansion plans.
3. We have supercomputing capabilities that are being used in bioinformatics, genomics, or other areas related to research informatics.
4. **Our institution has made strategic investments in research computing. Thus, our capabilities are robust and broadly available, but we are facing demand issues.**
5. Our research computing capabilities are robust and well defined, covering broad areas of application. We have processes in place to evaluate and grow our capacity.

## Anchor Statements

9

## Analytics Adoption Example

### HEALTHCARE ANALYTICS ADOPTION MODEL

Data binding grows in complexity with each level

Level 8	Personalized Medicine & Prescriptive Analytics	Tailoring patient care based on population outcomes and genetic data. Fee-for-quality rewards health maintenance.
Level 7	Clinical Risk Intervention & Predictive Analytics	Organizational processes for intervention are supported with predictive risk models. Fee-for-quality includes fixed per capita payment.
Level 6	Population Health Management & Suggestive Analytics	Tailoring patient care based upon population metrics. Fee-for-quality includes bundled per case payment.
Level 5	Waste & Care Variability Reduction	Reducing variability in care processes. Focusing on internal optimization and waste reduction.
Level 4	Automated External Reporting	Efficient, consistent production of reports and adaptability to changing requirements.
Level 3	Automated Internal Reporting	Efficient, consistent production of reports and widespread availability in the organization.
Level 2	Standardized Vocabulary & Patient Registries	Relating and organizing the core data content.
Level 1	Enterprise Data Warehouse	Collecting and integrating the core data content.
Level 0	Fragmented Point Solutions	Inefficient, inconsistent versions of the truth. Cumbersome internal and external reporting.

10

## Research Maturity Index Categories

11

## Why Bother?

- Within the institution
  - Enhanced Organizational Learning
- Benchmarking
- Prioritization & Planning
- Money
- Developing new models

Bititci US, Garengo P, Ates A, Nudurupati SS. Value of maturity models in performance measurement. Int J Prod Res. 2015;53: 3062–3085.
