\* The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .05.

\*\* The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .01.

\*\*\* The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .001.

<sup>a</sup>The n shown is the mean for 1997 (n=7,172), 1998 (n=6,487) and 1999 (n=5,823). NCVS incidences include all persons living in the central cities of metropolitan statistical areas weighted to the age, sex, racial/ethnic and income distribution of persons with SMI (see text for details).

<sup>b</sup>Categories and subcategories of Type of Crime are those used in NCVS publications.

<sup>c</sup>Completed violence and attempted/threatened violence are exhaustive categories of violent crime; the detailed categories under violent crime (Rape/Sexual Assault, Robbery and Assault) are also exhaustive categories of violent crimes. Personal theft is the only personal crime that is not also a violent crime.

<sup>d</sup>The sample rate of theft of unknown value for persons with SMI is zero; standard errors and incidence ratios are not reported.

<sup>e</sup>Because the Taylor series linearization refers to the t distribution to calculate confidence bounds, the lower computed confidence bound of the incidence ratio among persons with SMI may be below zero.
