* The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .05.

** The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .01.

*** The two tail probability that the confidence bound of the incidence ratio overlaps with 1.0 (no effect) is < .001.

^aNCVS incidences include all persons living in the central cities of metropolitan statistical areas weighted to the age, sex, racial/ethnic and income distribution of persons with SMI (see text for details).

^bCategories and subcategories of Type of Crime are those used in NCVS publications.

^cCompleted violence and attempted/threatened violence are exhaustive categories of violent crime; the detailed categories under violent crime (Rape/Sexual Assault, Robbery and Assault) are also exhaustive categories of violent crimes. Personal theft is the only personal crime that is not also a violent crime.

^dThere are too few cases of rape/sexual assault in the sample of males with SMI to report incidence rates, incidence ratios or tests by sex.
