People + Technology + Data + Credit Developing a sustainable community-driven approach to attribution

NATIONAL CENTER FOR DATA TO HEALTH

What needs to be considered? Let's look at a common workflow for a technical project:

Contribution Role Ontology A structured representation of scholarly contributions and research outputs

Community contributions are invisible to existing credit mechanisms

Join us!

Workshop: An attribution workshop will be held in the spring of 2019 in Chicago, IL, USA More info: http://bit.ly/AttributionSignUp

By using <u>contributor roles & research object types</u> to develop infrastructure to understand the scholarly ecosystem, we can better understand, leverage, and credit a diverse workforce and community
